

Steel. Material of Masterpieces

JANSEN

WE ARE JANSEN

And we are determined to enable architectural creativity.

Whether as supplier of steel systems for architectural solutions or as manufacturer of profile systems – we design the future and transform your ideas into sustainable, aesthetic and unique solutions.

As we are shaping the face of the city together with you, we feel responsible for energy efficiency and efficient material use. Steel is the material for unlimited recycling and therefore a sustainable material cycle. This is the environmental performance of steel.

Knowledge center for architect and façade builder

If you as an architect challenge us with your design ideas, we will start looking for the right system for your project. Even if you opt for bronze profiles, we can help you find the right solution. Our standard series are available in standard (powder) coated steel, stainless steel and weather-resistant Corten steel.

Heat and frost, high humidity, heavy tropical rain and a challenging landscape: architects need to take a wide range of conditions into account. However, the use of the largescale glazed surfaces allow you to implement your design concept without compromise.

REUSE is better than RECYCLE

The Environmental Product Declarations (EPD) certify that steel doors and windows from Jansen have a service life of 75 years and steel façades, such as the Jansen VISS façade, even have a service life of 100 years. In addition, steel remains efficient, reliable, and low-maintenance even with intensive use.

From factory to office
to apartment block –
there is no better way
to spell sustainability
than by reusing
existing buildings.

The contrast between the rigid, earthquake-proof reinforced concrete structure and the filigree glass interior surfaces is a key part of the design of the Futura One project in Taipei. The Jansen steel system enables a frameless construction with large glass surfaces that can withstand the wind loads exerted during regional typhoons, making it the perfect choice for the project.

OUR FAÇADE ENGINEERING SERVICES

VISS³ 3D printed steel nodes

We offer you the following services to provide you with the best possible support for your projects.

- Façade advice
- Preliminary static calculations
- U-value calculations
- CAD & BIM models
- Sustainability advice
