FACTSHEET

Jansen is an international family company which develops, manufactures and distributes steel profile systems for windows, doors and façades, as well as plastic products for the construction industry. The Jansen brand stands for Swiss quality, leadership and innovation. Our commitment to constantly improve our steel profile systems, has helped position us as a global market leader.

Jansen Group

The Jansen Group is still 100% family-owned to this day.

The Oberriet production location is part of the company's contribution toward promoting Switzerland as a business location. Jansen is currently training around 42 apprentices in 10 different professions.

Jansen has around 620 employees and generates a turnover of CHF 200 million.

Windows, doors and façades

Developing and producing sophisticated profile systems made from steel and stainless steel for windows, doors, gates and façades is one of Jansen's key competencies.

As exclusive licensees for Schüco in Switzerland and in Liechtenstein, we also offer complete solutions in aluminium to architects and processors in these countries. Jansen's wood/metal CONNEX system lends a homely feel to interiors and provides optimal protection thanks to its robust external panelling.

Plastic solutions

In the area of plastic solutions, the product portfolio includes systems for geothermal energy, home technology and pipe systems. Thanks to its many years of expertise in plastic extrusion, high-quality systems and in relation to engineering and consultation, Jansen becomes a preferred partner with a high level of innovation.

1923

Josef Jansen founds the company in Oberriet, starting with six employees

1930

The first precision steel pipe is welded
